Weekly Moodle Tip:

For exams or quizzes given in Moodle, Moodle provides an “Item Analysis”. This feature provides the instructor with valuable information such as, the Percent Correct, the Standard Deviation, and so on.

To view the Item Analysis for your quiz in Moodle:
1. Click on the quiz name on your course page.
2. Near the top of the screen you should see a series of tabs: Info Results Preview Edit Click on the “Results” tab.
3. Now, click on “Item Analysis” in the list under the tabs.

NOTE: For this information to be available, the quiz must be given/created in Moodle. Information available may vary by question type (Ex. Essay questions may not have as much information provided as True/False).
