Weekly Moodle Tip:

In moodle, you can display an entire directory (folder) of files to your students.

You can either display all of your files in your “Files” repository to your students or create a folder in your file repository with the specific files you would like to display.

To do this, click on the “Add a resource” drop down menu on your course page. Select “Display a directory”.

Fill in the information and next to “Display a directory” select the folder/directory you would like to display.

Click “Save and return to course”.

For further assistance, please contact the CIT.
